ABB Launches Full Line Cable Management System

ABB is proud to announce their new wiring duct and cable management system. The line includes wiring duct in both standard and high density, solid duct with knockouts, flexible duct, spiral wrap and cable ties. ABB also offers a full line of tools and accessories for all your cable management needs.

ABB standard wire duct is available in 28 different size combinations in either standard density (8-12mm slot) or high density (4-6mm slot). Made with UL 94 VO material, it is available in gray or white. The "no burr" design includes rounded-off inner edges. The cover design is captive allowing the duct to be mounted upside down as well as on horizontal and vertical surfaces. All standard wire duct comes in two meter lengths (6.56 feet) with cover included. (Covers can also be ordered separately).

ABB solid wiring duct employs a new design with circular knockouts on the sides to facilitate branch connections. This is ideal for applications requiring the use of rigid and corrugated conduits and has been introduced for environments in which

cables require greater protection against dust and other external agents (IP 40).

ABB flexible wire duct (available in seven sizes) is ideal for every situation in which wiring is subject to flexion or torsion. This wire duct can be bent or twisted without breaking and allows you to solve wiring protection issues where hinged or moving parts are concerned. The flexible wire duct is supplied standard with ready-fitted double-sided adhesive tape offering high adhesion on smooth clean surfaces.

ABB offers a variety of wire duct cutting tools. A durable hand held tool has been introduced where manual operation is desired. For more efficient manufacturing, ABB also offers bench mounted wire duct cutting machines, in both industrial and production grades. These tools can be set up for high quantity production runs or one time custom cuts.

The industrial grade tool offers a guarded cutting blade with a life of 250K cycles and an adjustable bump stop for measuring.

The production grade tool offers stainless steel construction and a cutting blade life of 400K cycles. This tool also offers a calibrated scale and fence for precision cuts.

Accessories for the wire duct product includes a rivet gun, plastic rivets, wire stops, label tags, plastic duct bases, din rail clips and adhesive tape.

To complete the cable management offering, ABB has a variety of cable ties and spiral wrap. Cable ties are made of polyamide 6/6 material and offered in white or black. Spiral wrap is available in translucent polyethylene or self-extinguishing polyethylene material. Accessories for cable ties include several mounting bases: self-adhesive, screw-in and push-in. Cable tie installation tools are also available.

For more information, contact your local ABB sales person or sales representative for our printed catalog – LV001 (formerly AC1051). You can also view and download the AC1051 from the ABB website at abb-control.com/html/docu_pdf.html (1.2mb).

ABB (www.abb.com) is a leader in power and automation technologies that enable utility and industry customers to improve performance while lowering environmental impact. The ABB Group of companies operates in around 100 countries and employs about 133,000 people. The company's U.S. operations employ about 10,000 in manufacturing and other facilities in 40 states.
